CenterState Banks, Inc. Offers Enhanced Remote Deposit Capture with Benchmark Technology Group's Corporate Capture21

Alpharetta, Ga., Nov. 2, 2010 – [Benchmark Technology Group](#), a leading provider of [branch automation solutions](#) and [technology management services](#), announced that Davenport, FL.-based CenterState Banks, Inc. implemented Corporate Capture21 (CC21), a second-generation, web-based application that allows merchants to submit accurate, balanced and imaged deposits from their remote location directly into their bank's processing centers.

"Corporate Capture21 allows merchants to focus on their businesses without having to make daily time-consuming trips to the bank," said Jarrod Hurd, vice president, treasury management officer, CenterState Bank of Florida. "They can easily create reports that contain deposit details and images, and they no longer have the hassle of storing deposits. We are always committed to exceeding customers' expectations, and Corporate Capture21 helps us to fulfill this objective."

CenterState Banks, Inc., a multi-bank holding company with four separately chartered banks, wanted a more intuitive remote capture solution that would meet the varied needs of their business customers. Control and visibility of merchant activity across all four banks was a critical requirement.

Corporate Capture21 provided CenterState Banks with an enhanced ability to control the deposit submission process; deposit images are automatically converted to industry standard X9 formatted files and stored on the bank's server, eliminating the need for physical storage of checks and deposit records. With CC21, merchant installs are far easier and the system ensures that deposits are in balance and made on time.

"CenterState Banks is very proactive in meeting the ever-changing needs of its customers. They make every effort to serve their customers with flexible business rules and features," said Jack Malinowski, chief technology officer for Benchmark Technology Group. "Corporate Capture21's reporting capabilities, security features and ease of deployment provides CenterState Banks with the scalability needed to easily and rapidly expand their merchant capture program and differentiate themselves to their commercial deposit customers."

Corporate Capture21 gives banks complete control over numerous deposit parameters including deposit frequency, checks per deposit, and maximum dollar amount per deposit and per check. Based on bank-defined business rules, merchants can use standard deposit tickets or they can let the system create virtual tickets. Each merchant using Corporate Capture21 has a scanner, which features a built-in CAR/LAR engine that reads and compares the dollar amount ensuring accurate readings. Duplicate detection is a standard feature of Corporate Capture21, which also supports multiple sign-on schemes that enhance remote deposit capture security for banks and their customers.

About Benchmark Technology Group

Since 1985, Benchmark Technology Group has been a leading provider of branch technology and software solutions for financial institutions of all sizes. The company offers a complete line of branch automation products and services including teller printers, scanners, ATMs and cash handlers.
